Corequisites

AST 109

Course Learning Outcomes

Knowledge:

- · Describe the scientific thinking process.
- · Describe the concept of seasonal changes on Earth.
- · Explain how to measure objects comparing size and distance.

Application:

- · Determine sizes and distances using indirect methods.
- · Utilize different methods of time and timekeeping.
- Use co-ordinate systems for plotting and locating objects.
- · Explain motion of objects.
- · Determine optics and resolution.
- · Relate the process of science to its importance in the daily world.
- Describe the history of discovery including changes from inductive to deductive reasoning.
- · Recognize that science is a "way of thinking" process.
- Describe the cause and effect of positions and their locations as they appear in space.

Integration:

- Recognize the role of science by integrating historical, social and literature into their perspective.
- · Analyze physical data from observations to write scientific papers.
- $\bullet\,$ Utilize a variety of sources to make astronomical measurements.
- · Make predictions based upon all of the information gathered.

Human Dimension:

- Work together in groups as well as individually during lab assignments.
- Recognize the importance of collaboration and learn to utilize data from others.

Caring - Civic Learning:

· Appreciate the concept that they are part of a larger universe.

Learning How to Learn:

· Apply researching skills to areas of interest.
