

ENV 270C - PRECAMBRIAN GEOLOGY OF MI

- Connect past geologic events with the distribution of natural resources and the history of mining activities within our state.

Learning How to Learn:

- Relate their course concepts to geological features in real-world applications.

Course Description

This course is a six-day field study of the Precambrian geology of the western Upper Peninsula of Michigan. The class will focus on rock and mineral identification, economic geology, and the geologic history of Michigan's Upper Peninsula. The relationships of ancient bedrock layers to recent surficial geologic processes and their associated landforms will also be explored. Group 1 course.

Required Prerequisites

Completion of any science course with laboratory and instructor permission.

Recommended Prerequisites or Skills Competencies

ENG 111, MTH 23

General Education Outcomes supported by this course

Communications - Direct

Course Learning Outcomes

Knowledge:

- Use the physical properties of rocks and minerals to identify unknown specimens.
- Record and plot GPS coordinates, measure compass directions, read and use geologic maps, and stratigraphic columns.
- Generate field notes with pertinent observations and field sketches.

Application:

- Prepare a collection of identified rocks and minerals found throughout the western Upper Peninsula of Michigan.
- Interpret rocks discovered to develop an understanding of past geologic events.
- Explain how rocks and minerals collected may be utilized as natural resources.

Integration:

- Conduct a geologic field investigation to prepare a geologic field report.

Human Dimension:

- Relate geologic materials to resources they use in their daily lives.

Caring - Civic Learning:
